

Patient Report

Automatically generated summary from the health-monitoring application.

Overall Summary

The main current concerns are recurrent leg pain and new-onset chest tightness. The user has repeatedly reported “my leg hurts today” focused on the leg over several timestamps from 2025-11-27 through 2025-11-29, suggesting persistent or frequently recurring lower limb discomfort, though no side, location (thigh/calf/knee), or triggers are documented. Device data around the lower body show moderate hip mobility (61–64) with low frictionIndex (0.19–0.22), relatively stable ankle balanceShift (0.15–0.18) with modest impactLoad (19–23), and improving gaitQuality (71 to 76) with slightly reduced foot pressure values, which may indicate reasonably preserved function despite reported leg pain. BackStabilizerV2 readings show mild improvement in stabilityIndex (55 to 59) and muscleSupport (0.75 to 0.81). NeckRelaxOne shows elevated tensionLevel (62–70) with low relaxationScore (30–41), suggesting ongoing upper-body muscle tension. More urgently, the user reports chest tightness starting the previous evening, worse when lying down and better when sitting up. The prior AI assistant emphasized that it could not give real medical advice and only offered general tips. This summary is not a diagnosis or medical advice and cannot replace assessment and care by a qualified healthcare professional.

Chat Summary (Recent Messages)

User (2025-11-29 18:45)

My chest feels tight since yesterday evening.

Assistant (2025-11-29 18:45)

Thanks for sharing that. This is not real medical advice, but chest tightness can have many causes...

User (2025-11-29 18:47)

It gets worse when I lie down, better when I sit up.

Assistant (2025-11-29 18:47)

Got it. Since this is just a demo and not real medical advice, I can only suggest general tips...
